

Team Members: John F. Lake, Jr. & Thomas Deranek

Software: OpenRCT2

Platform: Linux/Unix Systems; No Specific Hardware Requirements

GM13) In order to measure performance, we will use print statements and timestamps for the particular functions we will be changing. We will edit the features we are considering changing, and then we will test to see if the performance is worthwhile. If we deal with dynamic memory, we will run it through a program like valgrind to check and see if we are losing memory.

GM14) We have consulted outside resources on how the SDL library functions, and we have read through the documentation provided by the developers on this project. Because this is a small-scale application, there are not many other publications relevant to this project specifically.
